Kawasaki Kisen Kaisha, Ltd.

### **“K” LINE Exhibits at Techno-Ocean 2025**

Kawasaki Kisen Kaisha, Ltd. (“K” LINE) proudly announces the successful participation in Techno-Ocean 2025, held in Kobe International Exhibition Hall No. 2 from November 27 to 29.

At our booth, we showcased three key initiatives—“Seawing” automated kite system utilizing wind power, offshore support vessel business, and “K-Assist Project” a technology development project related to automated ship operation through panels and videos. Over the three days, we welcomed a number of visitors.

On November 28, during the exhibitor presentation session, Mr. Hiroto Arai, General Manager of the “K” LINE Environment/Technical Strategy Group, delivered a presentation on “K” LINE’s decarbonization initiatives.

The presentation covered initiatives to support low-carbon and decarbonization for ourselves such as fuel conversion, utilization of natural energy, and digital technologies for operational efficiency. It also introduced initiatives to supply alternative fuels such as LNG, as well as new technologies supporting society’s decarbonization, including offshore support vessel business and liquefied CO<sub>2</sub> transportation.

“K” LINE group is promoting a variety of initiatives to support the decarbonization of its own operations and society in accordance with its long-term environmental policy, ““K” LINE Environmental Vision 2050”. We aim to reduce environmental impact, contribute to a sustainable society and increase its corporate value.
